Competitor Bulletin #2020-01

In 2020, use of wheel inner tubes is optional, however, it is strongly recommended the new DT4 tires (front and rear) be run tubeless. Testing has shown use of even a standard tube increases the tire's carcass and tread temperature, degrading performance and endurance. When used, only a single inner tube per tire is allowed. No other devices aside from standard style inner tubes may be run. For 2021, use of an inner tube will only be permitted at TT events. At all other track configurations, nothing will be permitted inside the tire.

Due to the DT4 tire being heavier than the DT3, the maximum rear wheel assembly weight must not exceed **43 pounds**.
